

Jonathan Ferreira

Senior Product Frontend Engineer · UX Engineer · AI-Enabled Product Experiences

Tampa, FL · jonathanferreiradev@gmail.com · devignux.com · linkedin.com/in/jona-ferreira

Product-focused frontend engineer with 8+ years building AI-enabled SaaS products from ambiguous idea to shipped experience and iteration. Specializes in translating complex workflows into intuitive, high-trust user experiences using React, TypeScript, Python, and modern design systems. Bridges product thinking, UX, and engineering to rapidly prototype and ship learner and user-facing workflows that balance speed, clarity, accessibility, and scalability. Experienced owning features end-to-end in startup-style environments from Figma concepts and frontend architecture to API integration, iteration, and production delivery.

CORE SKILLS

Frontend	React, TypeScript, Next.js, Redux Toolkit, Zustand, Tailwind CSS, Material UI, State Management
Product & UX	UX Engineering, Product Thinking, Interaction Design, Rapid Prototyping, Accessibility, Design Systems
AI & Intelligent UX	Claude API, Prompt Engineering, AI-Assisted Workflows, AI-Native UX, Conversational Interfaces
Backend	Python, Django, Django REST Framework, REST APIs, PostgreSQL, API Design
Collaboration	Agile Development, Sprint Planning, Cross-Functional Collaboration, Code Reviews, Product Discovery

PROFESSIONAL EXPERIENCE

Product Engineer (Senior) · Gravyty · Remote · Sep 2022 – Dec 2025

- Led migration of a legacy enterprise fundraising platform into a modern React + TypeScript architecture, improving maintainability and reducing product-related support tickets by an estimated 40–50%.
- Owned complex user-facing workflows from concept through production, simplifying enterprise fundraising operations into faster, more intuitive self-serve experiences.
- Designed and shipped self-serve configuration panels and workflow management tools that eliminated recurring operational support requests and reduced dependency on customer success teams.
- Built AI-assisted fundraising experiences that surfaced contextual donor insights, workflow recommendations, and intelligent guidance directly within the platform.
- Created reusable WCAG 2.1 AA-compliant component systems adopted across 6+ products, accelerating feature delivery and improving UI consistency across teams.
- Collaborated closely with backend engineers to define API contracts, relational data flows, and role-based application behavior across enterprise environments.

Software Developer & Product Designer · Gravyty · Remote · Nov 2017 – Sep 2022

- Served as both product designer and frontend engineer across multiple enterprise SaaS initiatives, owning experiences from discovery and UX strategy through implementation and launch.

- Designed workflows for fundraising, donor management, and higher-education engagement systems used by nonprofits, universities, and schools.
- Simplified multi-step operational workflows into scalable, user-friendly interfaces that improved usability for non-technical users.
- Built scalable React component structures and reusable UI patterns that reduced duplicate implementation work and accelerated frontend development.
- Delivered end-to-end full-stack features using React, TypeScript, Python, Django, and REST APIs while balancing rapid delivery with maintainable architecture and UX quality.

Full-Stack Product Engineer · Independent / Freelance · Remote · Jan 2026 – Present

- Led end-to-end redesign and frontend architecture for Givzey and Version2.ai, consolidating fragmented web experiences into a unified HubSpot CMS platform.
- Designed and implemented reusable design systems including typography, layout grids, component patterns, and tokenized styling.
- Built custom HubSpot modules and dynamic content workflows using HubL, enabling non-technical teams to manage content independently.
- Built an AI-powered Autonomous Music Manager using React, TypeScript, Python, and Claude API featuring AI-generated artist briefings and recommendation workflows.
- Designed and shipped a production-ready beat marketplace platform with secure API integrations, dynamic audio workflows, and full UX ownership.

FEATURED PROJECTS

- **Autonomous Music Manager** — AI-powered product experience for independent artists built with React, TypeScript, Python, and Claude API.
- **Enterprise AI Fundraising Workflows** — Built AI-assisted fundraising interfaces used by nonprofits and higher-education institutions.
- **Beat Store Platform** — Production React app with secure API integration, licensing workflows, and dynamic media playback.

EDUCATION

B.A., Entrepreneurial & Small Business Operations · University of Massachusetts Dartmouth
