

Jonathan Ferreira

Senior Front-End Engineer • UI/UX Product Thinker • Team Leader

Tampa, FL • jonathanferreiradev@gmail.com • linkedin.com/in/jona-ferreira- • devignux.com

PROFESSIONAL SUMMARY

Senior Front-End Engineer with 8+ years of experience building modern, high-performance web applications across enterprise SaaS platforms. Proven leader who bridges engineering and design — translating complex requirements into intuitive, accessible UIs. Deep expertise in React, TypeScript, and Next.js, with hands-on experience in component architecture, responsive design, and cross-browser performance. Equally comfortable driving technical direction, mentoring developers, and communicating directly with clients and stakeholders. Fluent in written English, Spanish and conversationally proficient in spoken English Spanish

TECHNICAL SKILLS

Languages & Core: TypeScript, HTML5, CSS3 — deep proficiency, production-grade experience

Frameworks & Libraries: React (complex state, architecture), Next.js, Redux Toolkit, Modern State Management

UI/UX & Design: Figma (high-to-low fidelity prototyping), Design Systems, WCAG Accessibility, Responsive Design, UX Flows

Performance & SEO: Browser testing, debugging, performance optimization, SEO best practices, cross-browser compatibility

Backend & APIs: Python, Django, Django REST Framework, REST API integration

DevOps & Tooling: Git (branching strategies, PRs), GitHub Actions, CI/CD, Docker, Datadog, Azure DevOps

AI-Native Development: Claude Code, Cursor — AI-assisted development, prompt engineering, rapid prototyping iteration

PROFESSIONAL EXPERIENCE

Gravyty | Senior Software Engineer / Product Engineer | *Sep 2022 – Dec 2025*

- Led full migration of legacy server-rendered dashboard to a modern React + TypeScript client-side architecture, significantly improving usability and product adoption.
- Mentored junior and mid-level developers through code reviews, architectural guidance, and hands-on pairing — driving adoption of best practices across the team.
- Developed interactive Figma prototypes and UX flows to align Product, Engineering, and stakeholders before writing a single line of code, reducing costly rework.
- Designed and shipped complex, data-heavy dashboards and admin panels that simplified enterprise workflows for end users.
- Established a reusable component system with accessibility-first patterns (WCAG compliance), increasing development velocity and design consistency.
- Integrated REST APIs into secure, state-driven multi-user applications with complex permission models.
- Participated in full CI/CD lifecycle including code reviews, automated testing, deployment pipelines (GitHub Actions, Azure DevOps), and production monitoring via Datadog in Docker environments.
- Served as direct technical point-of-contact for Product Managers and business stakeholders — translating ambiguous requirements into structured, executable engineering plans.

Gravyty | Software Developer / Product Engineer | *Nov 2017 – Jan 2023*

- Partnered with Product Management to surface user pain points and design structured UX solutions within complex enterprise SaaS systems.
- Served as sole product designer on multiple initiatives — producing wireframes, high-fidelity mockups, and UX flows that clarified requirements and aligned cross-functional teams.

- Architected scalable React component structures to support platform growth and long-term maintainability.
- Owned features end-to-end from product discovery and UX exploration through production deployment, balancing design quality with technical feasibility.
- Collaborated closely with engineering, infrastructure, and product leadership to maintain fast, reliable delivery cycles.

Freelance | **Full-Stack Developer** | *Ongoing*

- Designed and built full-stack SaaS applications from requirements through deployment — handling authentication, relational data models, and multi-user dashboards.
- Built interactive prototypes and production-ready systems using React, TypeScript, and Python/Django.
- Developed data visualization dashboards and analytics-style admin interfaces for client-facing products.

FEATURED PROJECTS

Beat Store — swsmusicgroup.com: Production React application with secure API integration, dynamic media playback, and full UX design from flow to deployment. Demonstrates complete front-end ownership across design and engineering.

Autonomous Music Manager App: AI-powered web app for independent artists — daily briefings, career opportunity recommendations, artist page builder, and AI-generated EPK from user profile. Built with React, TypeScript, Python, and Claude API integration.

Enterprise SaaS Platforms (Multiple): End-to-end SaaS applications featuring authentication flows, relational database schemas, and multi-user dashboards — designed and shipped as sole developer/designer.

EDUCATION

B.A., Entrepreneurial & Small Business Operations — University of Massachusetts Dartmouth

Code samples available upon request — including live production projects, component libraries, and prototypes.
